

CLAIMS:

1. (canceled) A modular plant support system for plants comprising :
a tip, a stake and a connector section and holes;
said connector section being generally but not necessarily fixedly attached to said stake;
said connector section being hollow and having holes to allow a stake to be inserted into the top of said connector and through said holes in order to construct a structure.
2. (canceled) A modular plant support system for plants as in claim 1 comprising :
a separate tip which is releasably connected to said stake by a releasably connecting means.
3. (canceled) A modular plant support system for plants as in claim 1 whereas :
said holes are being paired.
4. (canceled) A modular plant support system for plants as in claim 2 comprising :
a tip releasable means consisting of two generally arrow shaped clips which engage suitably configured and sized notches hollowed out into said stake.
5. (canceled) A modular plant support system for plants as in claim 1 comprising :
stakes having different lengths.
6. (canceled) A modular plant support system for plants having the following method of assembly :
said stakes inserted through said top and said holes of said connector section in order to build a structure.
7. (canceled) A modular plant support system for plants as in claim 1 comprising :
stakes and connectors that are round in shape.
8. (canceled) A modular plant support system for plants as in claim 1 comprising :
stakes and connectors that are square in shape.
9. (new) A modular plant support system for plants comprising :
a tip, a stake and a connector section, and holes;
said connector section being attached to said stake;
said connector section being hollow and having a hole on top to allow a stake to be inserted into the top of said connector and holes along the length of said side connector to allow for insertion of stakes therethrough in order to construct a structure.
10. (new) A modular plant support system for plants as in claim 9 comprising :
a separate tip releasably connected to said stake by a releasably connecting means.
11. (new) A modular plant support system for plants as in claim 9 wherein :
said holes are being paired.
12. (new) A modular plant support system for plants as in claim 10 comprising :
a tip releasable means consisting of two generally arrow shaped clips engaging suitably configured and sized notches hollowed out into said stake.

13. (new) A modular plant support system for plants as in claim 9 comprising :
stakes having different lengths.

14. (new) A modular plant support system for plants having the following method of assembly :
said stakes inserted through said top and said holes of said connector section in order to build a structure.

15. (new) A modular plant support system for plants as in claim 9 comprising :
stakes and connectors that are round in shape.

16. (new) A modular plant support system for plants as in claim 9 comprising :
stakes and connectors that are square in shape.
